

3000j energy storage welding machine

The DR1-3000J Non-deformable Metal Energy Storage Spot Welder boasts versatility in adjusting parameters such as preload, discharge, forging, maintenance intervals, rest periods, and charging voltage, all independently. Capacitive energy storage spot welding machine, is the use of power frequency alternating current through the rectifier after charging to the capacitor, the stored electrical energy is then discharged by the welding transformer into a low electrical voltage, the energy is more concentrated and stable pulse current, through the contact point

Q: Do your factory sale directly? A: Yes, it is. Our factory sale directly, competitive price with high quality. Q: Can you export machines by your factory. Q: Where are your factory? Q: What do we need to do if the machine fails. A: In the guarantee time (1 year), we will send the spare parts to you

The DR1-3000J Non-deformable Metal Energy Storage Spot Welder boasts versatility in adjusting parameters such as preload, discharge, forging, maintenance intervals, rest periods, and charging voltage, all independently. It excels in performing high-standard welds on a diverse range of materials

DR-3000J capacitance energy storage spot welder/china welding machine Description: (1). No oxidation at spot joint ,polishing can be avoided. (2). A built-in voltage regulator ensures constant output voltage ,results even welding. (3). Digital controller and other precision components and parts are

Overseas, a professional platform gathers buyers and suppliers to make smart decision. We build a connection between the two parties to benefit both.
