Where are lithium resources located? As a year earlier, the largest lithium resources are concentrated in Bolivia and Argentina - 23 and 22 million tons, respectively. Lithium resources increased the most in the United States - from 14 to 19 million tons. Earlier, we reported on the discovery of significant potential lithium resources in the state of Nevada. Can lithium-ion be a solution to a storage problem? The supply chain is heavily dependent on lithium, cobalt, and nickel, creating exposure to geopolitical risks and price volatility. Safety is another concern: lithium-ion carries fire risk, and recycling remains a challenge. In short, lithium-ion remains indispensable, but it won't be the sole solution to the storage challenge. Are extraterrestrial bodies a potential reservoir of lithium? Several countries are looking towards the potential extraterrestrial bodies as potential reservoirs of several minerals including lithium needed to meet the demand for renewable energy and energy storage technologies in a low-carbon economy (Dallas et al.,). Are lithium ion batteries the future of battery storage? Lithium-ion batteries will continue to dominate short-duration storage. Flow batteries, thermal storage, and gravity systems could carve out niches in long-duration applications. Sodium-ion may become a middle ground for cheap, safe storage in stationary settings. The stakes are high. Where is lithium stored? For this reason, Li is stored in an inert atmosphere such as pure kerosene or mineral oil, or under a vacuum (Szlugaj and Bak,). With an average crustal abundance of 25 ppm, lithium (Li) is the 25th most abundant element in the Earth's crust (Taylor and McLennan,). Lithium is found in a variety of rocks, clays, and brines. What are the different types of lithium resources? Unconventional lithium resources such as geothermal waste, lithium in borate deposits, lithium-enriched coal deposits, lithium-rich industrial wastes such as red mud, acid mine drainage, and recycling are also important to meet the growing demand for lithium.
