What type of energy system does Bolivia use? Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, ). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What are the heating demands in Bolivia? Residential heating demands in Bolivia are quite low, though they do notably increase throughout the transition as access to energy services increase, except for biomass for cooking, which is phased out by the end of the transition. Heating demands are projected to increase from 52 TWh in to 205 TWh in . Fig. 12.

Will electricity demand increase in Bolivia in ? Simulations performed using the LUT Energy System Transition model comprising 108 technology components show that electricity demand in Bolivia would rise from the present 12 TWh to 230 TWh in , and electricity would comprise 82% of primary energy demand.

How much solar power does Bolivia have? In the study of Jacobson et al. ( ), Bolivia's all-purpose end load would be covered by 22% wind energy, 15% geothermal, 3% hydropower, 49% solar PV, and 10% CSP. For the whole of South America, L&#246;ffler et al. ( ), find roughly 40% shares of both hydropower and solar PV, with the remaining 10% covered by wind offshore and onshore.

Does Bolivia have a lithium resource? Given that Bolivia's PT region is home to the largest lithium reserve in the world (Sauer et al., ), development of cost of Bolivia's own lithium usage as extraction of this resource develops may influence decision makers regarding lithium applications in the Bolivian energy system.

Should Bolivia use solar energy to generate synthetic fuels? Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security. Due to the lack of GHG emission costs in BPS-3 fuel costs remain for the fossil fuels used in the heat and transport sectors. Fig. 23.

Under the Paris Climate Agreement, sustainable energy supply will largely be achieved through renewable energies. Each country will have its own unique optimal pathway to transition to a fully sustainable system.
