What is energy storage & efficient air conditioner? Recently named an R& D 100 Award winner, the Energy Storing and Efficient Air Conditioner is a new class of cooling technology--one that separates dehumidification from active cooling and integrates energy storage to reduce costs, support grid stability, and maintain indoor comfort with significantly less energy. What is thermal energy storage for space cooling? Thermal Energy Storage (TES) for space cooling, also known as cool storage, chill storage, or cool thermal storage, is a cost saving technique for allowing energy-intensive, electrically driven cooling equipment to be predominantly operated during off-peak hours when electricity rates are lower. What is a cool storage system? Cool storage systems are inherently more complicated than non-storage systems and extra time will be required to determine the optimum system for a given application. In conventional air conditioning system design, cooling loads are measured in terms of "Tons of Refrigeration" (or kW's) required, or more simply "Tons". Does cool storage reduce energy consumption? Cool storage will reduce the average cost of energy consumed and can potentially reduce the energy consumption and initial capital cost of a cooling system compared to a conventional cooling system without cool storage. How do you choose a chiller for ice storage? For chilled water or ice storage systems, designers select chillers based on the "Ton-hours" of cooling required. A theoretical cooling load of 100 tons maintained for 10 hours corresponds to ton-hour cooling load. One of the design challenges of thermal storage is to develop an accurate cooling load profile of the project. How many tons of air-conditioning does a building need? For a building demanding 400 tons of air-conditioning, the advantages are exemplified by the installations below. A traditional chilled water system using 44°F (6.7°C) supply and 54°F (12.2°C) return will require 2.4 gallons per minute (GPM) of chilled water for each ton-hour of refrigeration.
