

energy storage battery cost decline curve

Why did battery prices go down in 2023? The decline in battery costs over the past decade leading up to 2023 helped reduce the cost of energy storage and adoption of BESS projects globally. While the prices went up in 2022, they declined in 2023 to an all-time low, led by the moderation in raw material prices, amid the increase in production across the value chain. How much does a battery storage system cost? Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from numbers to US\$165/kWh in 2023. Do projected cost reductions for battery storage vary over time? The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time. Figure ES-1 shows the suite of projected cost reductions (on a normalized basis) collected from the literature (shown in gray) as well as the low, mid, and high cost projections developed in this work (shown in black). Why are battery costs falling? Battery costs have been falling quickly. To reduce global greenhouse gas emissions we need to shift towards a low-carbon energy system. Large reductions in the cost of renewable technologies such as solar and wind have made them cost-competitive with fossil fuels. Do battery storage technologies use financial assumptions? The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for the research and development (R&D) and Markets & Policies Financials cases. Are battery electricity storage systems a good investment? This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials. Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from numbers to US\$165/kWh in 2023. Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from numbers to US\$165/kWh in 2023.
