turbines needs storage solutions, such as BESSs to become reliable energy sources and provide power on large clockwork energy storage device for home use. Home energy storage devices store electricity locally, for later consumption. Electrochemical energy storage products, also known as "Battery Energy Storage System" (or "BESS" for short), are used for various applications, including Ocean Energy Harvesting. The open-circuit voltage, the short-circuit current, and the transferred charge of the energy storage triboelectric nanogenerator (ES-TENG) with different blade materials are shown in Figure 3. Clockwork energy storage generator This energy is gradually released through gears, converting potential energy into motion, permitting accurate timekeeping. 3. The design enables regulation of energy release, ensuring accurate timekeeping. Energy Storage Triboelectric Nanogenerator Based on Ratchet Mechanism Hence, the energy storage TENG (ES-TENG) based on the ratchet mechanism is proposed in this work. The ES-TENG uses the ratchet mechanism to store the wave energy in the clockwork mechanism. Clockwork A clockwork mechanism is often powered by a clockwork motor [4] consisting of a mainspring, a spiral torsion spring of metal ribbon. Energy is stored in the mainspring manually by winding it up, turning a key attached to a ratchet.
