

Who is energy storage solutions (E22)? At Energy Storage Solutions (E22), we have a highly specialized technical team with many years of accumulated experience in the sector, trained to design, implement, commission and provide assistance in the operation and maintenance stage of any of these subsystems. How to control and maintain electrochemical storage facilities? Another essential factor for the optimum control and maintenance of electrochemical storage facilities is to provide the plant with a system for processing and interpreting data, issuing reports and managing alarms, both for the technical teams in charge and for customers. Can energy management strategies cope with MGS equipped with ESS? Contrary to other proposed approaches, the present work aims at defining an energy management strategy that is able to cope with the main issues of MGs equipped with ESS, i.e., ESS degradation and unexpected outages of the main grid, which can be appreciated only considering long time horizons. Optimal operation and maintenance of energy storage systems in To effectively address these challenges, a novel method for combined operation and maintenance management of ESS has been developed.
