What is the UL standard for energy storage systems? For ESS, the standard is UL 9540, Standard for Energy Storage Systems and Equipment. UL covers the complete ESS, including battery system, power conversion system (PCS), and energy storage management system (ESMS). Each of these components must be qualified to its own standard: Does industry need standards for energy storage? As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards" [1, p. 30]. Do energy storage systems need to be certified? U.S. fire and electrical codes require that energy storage systems be listed, meaning the product must be tested by a Nationally Recognized Testing Laboratory (a private-sector organization recognized by the Occupational Safety and Health Administration) and certified to meet consensus-based test standards. What is a framework for evaluating energy storage technologies in stationary applications? A framework for this assessment is provided by IEEE Std 1547.4, IEEE Recommended Practice for the Characterization and Evaluation of Energy Storage Technologies in Stationary Applications. Additional guidance is provided for certain classes of battery systems in a series of subsidiary documents. What is the UL - product standard? One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment. Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section. The UL - product standard is the key product safety listing for stationary ESS. What is energy storage R& D? [1, p. 30]. Under this strategic driver, a portion of DOE-funded energy storage research and development (R& D) is directed to actively work with industry to fill energy storage Codes & Standards (C& S) gaps. A key aspect of developing energy storage C& S is access to leading battery scientists and their R& D insights. UL covers the complete ESS, including battery system, power conversion system (PCS), and energy storage management system (ESMS). Each of these components must be qualified to its own standard: UL 1642, Standard for Batteries for Use in Stationary and Motive Auxiliary Power Applications. A Comprehensive Guide: U.S. Codes and Standards for Standards, on the other hand, are technology or product specific, and provide a method to verify that the technology or product meets or exceeds the minimum acceptable level of safety.
