How does the PCs work?The PCS supports Modbus protocol, adopts RS485 and Ethernet communication interface and facilitates users to conduct background monitoring for the PCS and realizes remote signaling, remote metering, remote control and remote regulating of storage inverter. Table 6-7 Communication interface with other equipment Equipment Wiring Method

What should be included in a contract for an energy storage system?Several points to include when building the contract of an Energy Storage System:

- o Description of components with critical technical parameters:power output of the PCS, capacity of the battery etc.
- o Quality standards:list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.

Why should you choose a battery energy storage system supplier?Sinovoltaics' advice:the more your supplier owns and controls the Battery Energy Storage System value chain (EMS, PCS, PMS, Battery Pack, BMS), the better, as it streamlines any support or technical inquiry you may have during the BESS' life.

### COOLING TECHNOLOGIES

How to transport the PCs during shipping?The unevenness of the support surface must be less than 0.25%. Do not use the installed kick plate to transport the PCS.

### 5.2 Transporting the PCS

#### 5.2.1 Transport and storage

The module of the PCS are installed in the PCS cabinet rack during shipping. During device transport and storage, pay attention to the caution sign on the packing case. What is a combined generation and storage system?These combined generation and storage systems can be "islanded" in remote or isolated areas or grid-tied with the ability to operate both with interaction with the grid or disconnect from the grid to maintain operations separately as needed (e.g., in the event of a grid outage). When should a battery energy storage system be inspected?Sinovoltaics advice: we suggest having the logistics company come inspect your Battery Energy Storage System at the end of manufacturing, in order for them to get accustomed to the BESS design and anticipate potential roadblocks that could delay the shipping procedure of the Energy Storage System.

### Why Energy Storage Is the Future of the Grid (with Malta CEO Ramya Swaminathan)

Malta CEO Ramya Swaminathan joins Azeem Azhar to discuss why energy storage is so crucial to fighting Basics of BESS (Battery Energy Storage System)PCS converts DC power discharged from the BESS to LV AC power to feed to the grid. LV AC voltage is typically 690V for grid connected BESS projects. LV AC voltage is typically
