

## how to manage work in groups in the energy storage team

What is teaming up to save energy? Teaming Up to Save Energy is a "how-to" guide on building an energy management team. The guide discusses the structure, launch, and maintenance of an energy team. Examples from ENERGY STAR partner organizations and a checklist are provided to illustrate practices and help with implementation. What is an energy team guide? The guide discusses the structure, launch, and maintenance of an energy team. Examples from ENERGY STAR partner organizations and a checklist are provided to illustrate practices and help with implementation. This guide complements "Guidelines for Energy Management," which is available online at [.energystar.gov](http://.energystar.gov). What is a team approach to energy management? A team approach improves buy-in from all levels of the organization, which helps to ensure greater energy savings. Senior management needs to perceive energy management as part of the organization's core business. The key is an energy team leader at the corporate-level who is empowered by support from the top senior management. How do energy management meetings work? At the meetings, the team members report on their progress on assigned tasks and provide monthly reports on energy use so that the team can build up data. The meetings also offer opportunities for presentations on best practices by in-house and outside technical and operational experts. Why should you involve employees in energy management? Involving employees in energy management can not only help achieve your goals, but it can also lead to higher retention and increased job satisfaction. Regularly communicate the importance, status, and outcomes of energy management initiatives. Why? Continuous improvement is a major component of energy management. What are the guidelines for energy management? More details on the "Guidelines for Energy Management" can be found at [.energystar.gov](http://.energystar.gov). Establishing an energy team is an important part of the first step in energy management, "Make Commitment." The energy team is responsible for planning, implementing, benchmarking, monitoring, and evaluating the organizational energy management program. Direct Ownership models are best for small systems or organizations with large amounts of resources who can more effectively manage the financial risk of owning assets themselves. DO: Strive to establish the energy director as a full-time position and allocate at least 20 percent of each energy team member's time if your company has multiple facilities and large energy expenditures. Energy storage is the capture of energy for use at a later time, and a battery energy storage system is a form of energy storage. Plus, our integrated team manage your entire energy storage project, meaning fewer contracts and more accountability. Establishing energy management best practices is a great way to jump-start energy savings and get on track to achieve long-term energy savings and GHG emissions reductions. Taking the first step can seem overwhelming. Today we will walk through seven key components of energy management. Assembling an effective team before the project begins can streamline the implementation of these systems and ensure that the design, installation, and operation of the system are well aligned with the needs of the facility owner. Assembling an Effective Team for Renewable Generation Direct Ownership models are best for small systems or organizations with large amounts of resources who can more effectively manage the financial risk of owning assets
