Why do we use solar photovoltaic & battery energy storage at bus depots? The inspiration for our research emerged from the growing focus on integrating transportation with renewable energy systems. We were interested in the energy island and self-sufficiency in the beginning. Therefore, we introduce solar photovoltaic (PV) and battery energy storage at bus depots (charging hubs). How to maximize economic profits for solar PV & energy storage? Combined with three scenarios related to subsidy policies for solar PV, we maximize the economic profits for solar PV and energy storage by optimizing the installed capacity of solar PV, energy storage capacity, bus charging schedules, solar PV use, and energy storage use. Does integrating solar PV with energy storage make a profit? While unsubsidized solar PV yields profit 64% above costs, adding battery storage cuts profits to 31% despite offering grid benefits. The sensitivity analysis demonstrates the impact of energy storage cost and grid electricity pricing on the net profit of integrating solar PV with energy storage at bus depots. How can energy storage be used in a traction power system? Energy storage can be used to store energy that would otherwise have been consumed by the resistor banks, and then released back into the traction power system when there is sufficient electrical load. If all resistor energy could be recovered using ESS the total annual savings for the 7 Line would be 6,335,164 kWh or about \$886,923. Can wayside energy storage systems recover regenerative braking energy? City University of New York (CUNY)/ConEd/NYCT performed a study pertaining to the application of wayside energy storage systems (ESS) for the recuperation of regenerative braking energy within the NYCT subway system. How is energy storage used in energy recovery applications? In energy recovery applications, energy storage is used to reduce energy consumption through the capture and release of regenerated energy from rolling stock. Typically, energy produced by the train during braking is consumed by other trains operating in the vicinity.
