In , world pumped storage generating capacity was 104 , while other sources claim 127 GW, which comprises the vast majority of all types of utility grade electric storage. The had 38.3 GW net capacity (36.8% of world capacity) out of a total of 140 GW of hydropower and representing 5% of total net electrical capacity in the EU. had 25.5 GW net capacity (24.5% Pumped storage hydropower (PSH) is a form of clean energy storage that is ideal for electricity grid reliability and stability. PSH complements wind and solar by storing the excess electricity they create and providing the backup for when the wind isn't blowing, and the sun isn't shining. Storage Hydropower The primary advantage of hydropower plants with storage is their ability to store large volumes of energy and respond to variable load requirements, from short term (daily peaking) to weekly Pumped storage hydropower: Water batteries for solar and wind Water Batteries For Solar and Wind Power?How It WorksWorld's Biggest BatteryGravity Storage, Grid-ScaleFuture PotentialPolicy RecommendationsFurther ReadingLatest StatisticsPumped hydropower storage uses the force of gravity to generate electricity using water that has been previously pumped from a lower source to an upper reservoir. The water is pumped to the higher reservoir at times of low demand and low electricity prices. At times of high demand - and higher prices - the water is then released to drive a turbine ?hydropower ??????#b_results
