Can battery storage be used with solar photovoltaics in Zambia? The Zambian regulation foresees customs duty and VAT exemptions for most equipment used in renewable energy or battery storage projects. Detailed information is provided in In this section, we discuss the opportunity of battery storage in combination with solar photovoltaics from a financial point of view. Will Zambia increase its solar power capacity by ? The Zambian government has set a target to increase its installed solar and wind capacity to 600 MW by . However, the current installed capacity for solar photovoltaics is only 90 MWp, indicating significant underutilisation of Zambia's potential in the renewable energy sector. What will Zambia's energy demand look like in ? The government anticipates that peak demand will be at 8,000 MW by and 10,000 MW by (from around 3,000 MW in ). It also projects that the demand will be largely driven by mining and agricultural consumers and not residential consumers as projected in the COSS (Government of Zambia, ).

#### 4. Zambia's renewable energy landscape

Will the demand for power continue to rise in Zambia? While the Zambian government accepts that the demand for power will continue to rise in Zambia, it has taken the view that the demand will be much higher than the 95% projected under the COSS. Does Zambia have a good solar system? Zambia benefits from excellent solar resources, with a specific production output between 1,600 and 1,800 kWh/kWp per year. The regions with the best resources are the south-west part of the country as well as the region around Lake Bangweulu, east of Mansa. Why is Zambia a good place to ship from Germany? One of the particularities of Zambia, as mentioned earlier, is that the country does not have direct access to the sea. The best port for the shipment of a container of goods or products from Germany or any part of Europe to Zambia is through the port of Walvis Bay, Namibia, because of its shorter distance to Europe.
