What is energy storage price?The price is the expected installed capital cost of an energy storage system. Because the capital cost of these systems will vary depending on the power (kW) and energy (kWh) rating of the system, a range of system prices is provided. 2. Evolving System Prices What is the Energy Storage pricing survey (ESPs)?3. Purpose The annual Energy Storage Pricing Survey (ESPS) is designed to provide a reference system price to market participants, government officials, and financial industry participants for a variety of energy storage technologies at different power and energy ratings. What are the different types of energy storage systems?The survey methodology breaks down the cost of an energy storage system into the following categories: storage module, balance of system, power conversion system, energy management system, and the engineering, procurement, and construction costs. What are energy storage technologies?Energy storage technologies are used at all levels of the power system. They are priced according to five different power ratings to provide a relevant system comparison and a more precise estimate. What resources are available for energy storage?The following resources provide information on a broad range of storage technologies. General Battery Storage, ARPA-E's Duration Addition to electricitY Storage (DAYS), HydroWIRES (Water Innovation for a Resilient Electricity System) Initiative What are the different segments of an energy storage system?The following are the definitions of the different segments of an energy storage system starting with the central energy storage component and working outwards. Storage Module (SM): An assembly of energy storage medium components (battery) built into a modular unit to construct the energy storage capacity (kWh) of an energy storage system.
