How much does a PV system cost? Our operations and maintenance (O&M) analysis breaks costs into various categories and provides total annualized O&M costs. The MSP results for PV systems (in units of real USD/kWdc/yr) are \$28.78 (residential), \$39.83 (community solar), and \$16.12 (utility-scale). How much does a PV system cost in ? The current MSP benchmarks for PV systems in real USD are \$28.78/kWdc/yr (residential), \$39.83/kWdc/yr (community solar), and \$16.12/kWdc/yr (utility-scale, single-axis tracking). For MMP, the current benchmarks are \$30.36/kWdc/yr (residential), \$40.51/kWdc/yr (community solar), and \$16.58/kWdc/yr (utility-scale, single-axis tracking). How efficient is a rooftop PV system? We model a baseline 8-kWdc rooftop PV system using 20.8%-efficient, 1.97-m² monofacial monocrystalline silicon modules from a Tier 1 U.S. supplier, microinverters with an inverter loading ratio (ILR) of 1.21 imported from China with the Section 301 tariff, and a 5-kW/12.5-kWh alternating-current (ac) coupled lithium-ion storage system. How many inverters does a PV system use? The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs. What is the IRA & how does it affect PV installations? The IRA, which was passed into law in August, created incentives for domestic PV manufacturing and deployment that analysts expect to drive significant increases in U.S. PV installations and use of domestically manufactured components (Feldman et al.).
