Why do we need pumped storage power stations? Hence, construction of pumped storage power stations can effectively improve the flexibility of the clean energy base and support the depth of new energy consumption. How pumped storage power stations can improve UR and LR? The construction of pumped storage power stations among cascade reservoirs can improve the flexible adjustment ability of the clean energy base, which also changes the water transfer and electrical connection of UR and LR at the same time. Can pumped storage power stations support a high-quality power supply? Hence, to support the high-quality power supply, this research explores the complementary characteristics of the clean energy base building different types of pumped storage power stations, and recognizes the efficient operation intervals of the giant cascade reservoir. Can pumped storage power stations be built among Cascade reservoirs? The construction of pumped storage power stations among cascade reservoirs is a feasible way to expand the flexible resources of the multi-energy complementary clean energy base. However, this way makes the hydraulic and electrical connections of the upper and lower reservoirs more complicated, which brings more uncertainty to the power generation. What is pumped storage power station (PSPS)? Pumped storage power stations (PSPS) can be divided into the pure pumped-storage power station (PPSPS) and the hybrid pumped-storage power station (HPSPS) according to the presence or absence of runoff inflow in UR and LR.
