Single-machine scheduling with energy generation This paper considers a single-machine scheduling problem with sequence-dependent setup times and energy-generation and storage systems. Each job requires a sequence-dependent setup to be processed on the Single-machine scheduling with fixed energy recharging times to We study single-machine scheduling problems where processing each job requires both processing time and rechargeable energy. Subject to a predefined energy Energy Saving Scheduling of A Single Machine System Based on Energy cost becomes an important performance indicator of a production process. A great deal of energy is wasted because of the idle period resulted from the un Energy-Saving Production Scheduling in a Single A single-machine scheduling problem that minimizes the total weighted tardiness with energy consumption constraints in the actual production environment is studied in this paper.
