What does the European Commission say about energy storage? In March, the European Commission published a series of recommendations on energy storage, outlining policy actions that would help ensure greater deployment of electricity storage in the European Union. Does the energy storage strategic plan address new policy actions? This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of (42 U.S.C. § 17232 (b) (5)). What is a storage policy? All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings. Why are energy storage resources important? Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 states, plus the District of Columbia and Puerto Rico, have 100% clean energy goals in place. Which states have energy storage standards? Massachusetts' energy storage target was established in by An Act to Advance Clean Energy and updated in . In , Michigan's SB 271 established energy storage mandates as part of a clean energy and climate action package. Nevada's energy storage standard was established by Senate Bill 204 in . Which states have energy storage goals? A law, An Act to Advance Energy Storage in Maine, established energy storage goals and directed steps to advance storage deployment. In , Maryland's HB 910 established storage deployment targets. Massachusetts' energy storage target was established in by An Act to Advance Clean Energy and updated in .
