Why is energy storage management important for EVs? We offer an overview of the technical challenges to solve and trends for better energy storage management of EVs. Energy storage management is essential for increasing the range and efficiency of electric vehicles (EVs), to increase their lifetime and to reduce their energy demands. What is energy management in hybrid vehicles? Energy management strategies control the power flow between the ICE and other energy storage systems in hybrid vehicles [136]. Energy management in HEVs and PHEVs minimizes the energy consumption of the powertrain while fulfilling the power demands of driving. What is a hybrid energy storage system? 1.2.3.5. Hybrid energy storage system (HESS) The energy storage system (ESS) is essential for EVs. EVs need a lot of various features to drive a vehicle such as high energy density, power density, good life cycle, and many others but these features can't be fulfilled by an individual energy storage system. Are TENGs a sustainable power supply? TENGs have been utilised to harvest various forms of energy as a sustainable electrical power supply. Mao et al. and Bhamre et al. scavenged friction energy from rolling tyres through a single-electrode TENG for improving travelling range of EVs. Their energy conversion efficiency was reported as 10.4%. What are energy storage systems? Energy storage systems are devices, such as batteries, that convert electrical energy into a form that can be stored and then converted back to electrical energy when needed [2], reducing or eliminating dependency on fossil fuels [3]. Energy storage systems are central to the performance of EVs, affecting their driving range and energy efficiency [3]. Why is ESS required to become a hybrid energy storage system? So, ESS is required to become a hybrid energy storage system (HESS) and it helps to optimize the balanced energy storage system after combining the complementary characteristics of two or more ESS. Hence, HESS has been developed and helps to combine the output power of two or more energy storage systems (Demir-Cakan et al.,).
